

HyperDeflate

White Paper

HyperDeflate

*Accelerating your D.Y.O.R to keep up with your
F.O.M.O*

Abstract

HyperDeflate was born as a result of two things: frustration and empathy. We know, it's a weird combination. Two investors, now our developer team, became overwhelmed by the amount of nefarious activity occurring in the crypto space. It seemed as though there were very few safe investments, where developers were genuine. The need for the HyperDeflate token (\$HDFL) was born.

With a desire to be impactful and useful, HDFL is not your typical "meme coin." The HDFL leadership intends on utilizing the token platform, to develop a cell phone based application, which will allow users to screen for various forms of nefarious coding and potential "rug pulls." Access to this unique application, will be available for purchase only with HDFL. Additional funding will be raised for proper development of the application and a screening process will take place for the application developer, to ensure alignment with the group's values. The subscription service will afford HDFL the luxury of being a revenue generating service, whereby reinvestment in the token will take place.

The high-level roadmap contained within this document is a loose perspective of the coming phases. With the potential for HDFL to be a revenue generating platform, the possibilities for helping investors and newcomers to the crypto space are endless.

Core Values

Transparency

We will never be anything but transparent with the community. Nothing is more important to us than being able to tell the truth, even if sometimes that isn't the best look for us. Our team will be available to answer questions, no matter how pressing, or how minor. Being transparent allows for us to work on achieving our second core value.

Trust

This project was founded based on the lack of trust in the BSC community, due to the amount of projects that take advantage of people. We will earn your trust. Our developer is fully exposing himself, which developers will not do in this market, unless they have only the best intentions. We believe that by being transparent and hosting regular live sessions, we will be able to earn your trust.

Community

The community we build is everything. Word of mouth in the cryptocurrency world is absolutely crucial. We believe that by building a stable, supportive community, we will be primed for success.

Presale and Launch Specifics

Soft Cap: The minimum amount raised for the token to launch is 88 units of BNB.

Hard Cap: The maximum amount raised in presale is 175 units of BNB.

Upon launch, DXSale will automatically lock 70% of presale funds to the liquidity pool for five (5) years. This minimum contribution level (soft cap), will allow reasonable stability for initial trading. The remaining 30% of funds raised will be retained by the developer to start funding the initial phases of the project, marketing, development and cover costs incurred to launch the project. Please note that DXSale allows for only 51% of the funds raised to be locked in liquidity.

High Level Roadmap

Post-Launch

- Development of White Paper
- Website Updates
- Social Media Account(s) Creation and Base Building
- Identify and Appoint Administration, Moderation & Support

Phase One (Advanced Post-Launch)

- Additional Social Media Marketing, Paid & Unpaid
- Initial Strategic Discussions for Application
- CoinGecko Application

Phase Two

- Strategic Marketing, Higher Cost
- Partnership Development
- Background Application Development

Phase Three

- Application Testing Period
- Market Planning for Application Launch

Phase Four

- Launch of Application
- Revenue Generation

Please note that phases may run concurrently to best support the present interest of the project.

The HyperDeflate Ecosystem

HDFL Token

HyperDeflate (\$HDFL) is a BEP20 token with a total fixed supply of one (1) quadrillion (10^{15}). HDFL was born as a result of continuous “rug pulls” on the Binance Smart Chain, to provide a way for investors to feel safe. The completed presale was hosted by DXSale, resulting in initial liquidity being automatically locked for five (5) years.

PancakeSwap

PancakeSwap is a Binance Smart Chain based Decentralized Exchange (DEX) for swapping BEP-20 tokens. Read more about PancakeSwap here: [https:// docs.pancakeswap.finance/](https://docs.pancakeswap.finance/)

Binance Smart Chain

Read more about the Binance Smart Chain here: [https:// academy.binance.com](https://academy.binance.com)

Tokenomics

Transaction Tax

There is a total tax of 10% on each transaction (buy, sell, transfer), all of which is burned. This unique set of tokenomics is completely untouched on the Binance Smart Chain and has provided investors an opportunity for something that is not a direct clone of other projects.

Token Figures

A total supply of one (1) quadrillion (10^{15}) tokens exists. Post-presale, 97+% was burned.

DoxxLocker

Overview

DoxxLocker is a free web-based anti-scam platform in development allowing users to review basic information on the BSC, view a history of projects that have been “rug-pulled” and identify new, vetted projects. The information contained within DoxxLocker provides additional learning and enables investors to build off their own research. As a free platform, the HyperDeflate team will generate revenue for the HDFL project through ad revenue of verified projects.

Features

DoxxLocker will include:

- Definitions - A list of definitions will be available for those new to the crypto space. This will help new investors answer basic questions about without fear of being publicly ridiculed.
- Doxxed Projects - DoxxLocker will include a list of projects with currently doxxed developers. Developers will be able to submit additional information to be included in their project's profile, should they wish, granting users and developers transparency and security.
- Advertising - Vetted projects will be able to promote themselves on the DoxxLocker platform for a fee only payable in HDFL tokens.
- Previous Rug Pulls - A repository of previous rug pulls will be available on DoxxLocker. This will allow for users to identify patterns with developers, specific media accounts, etc.
- Integration - DoxxLocker will be available in an entry-level capacity prior to the release of our screening application. Once both are complete, they will be useable concurrently as part of the system of tools we are developing to assist in scam prevention.
